

CS624 Full-Stack Development Mobile App
PE02 – Core Components
Developed by Sam Chung on February 25, 2022
School of Technology & Computing (STC)
City University of Seattle (CityU)

Before You Start

- You already created a private GitHub repository for all your programming exercises, “cs624-pe-your_first_name.”
- You allowed your instructor and the Teaching Assistant to access your GitHub repository for programming assignments.
- The GitHub Codespaces may bill your account according to your usage. Check the price at <https://docs.github.com/en/billing/managing-billing-for-github-codespaces/about-billing-for-github-codespaces>.
- Some steps are not explained in the assignment. If you are not sure what to do:
 - Consult the resources listed in your course.
 - If you need help solving the problem after a few tries (~15 minutes), ask a TA for help.

Learning Outcomes

Students will be able to:

- Create a React Native mobile app using core components – View, Text, ScrollView, Image, TextInput, and StyleSheet.

Problem

Write a “CoreComponents” mobile app that will display MSCS courses with the following constraints:

- User Requirements
 - You can find the “icon.png” under the “./assets” directory.
 - You can enter your favorite course.
 - You display the 8 core, 2 depth of study, and 1 capstone course.
 - You can access the CityU’s catalog at <https://cityu.smartcatalogiq.com/2022-2023/ay-2022-2023-catalog/>.
- System Requirements
 - You must use an arrow function for the functional component.
 - You must use the core components at least once – View, Text, ScrollView, Image, TextInput, and StyleSheet.
 - Your screen is scrollable.
 - By using an internal style, the screen shows some styles.

For example, the following screen shows the outcomes.

9:06 5G 71%

Which course did you like?

Core Requirements (24 credits)

- CS 504 Software Engineering
- CS 506 Programming for Computing
- CS 519 Cloud Computing Overview
- CS 533 Computer Architecture
- CS 547 Secure Systems and Programs
- CS 622 Discrete Math and Algorithms for Computing
- DS 510 Artificial Intelligence for Data Science
- DS 620 Machine Learning & Deep Learning

Depth of Study (6 Credits)

- CS 624 Full-Stack Development - Mobile App
- CS 628 Full-Stack Development - Web App

III

Submission

1. If you already created a GitHub repository for your programming exercises, “cs624-pe-*your_first_name*,” create a directory for programming exercise 2, “PE02-CoreComponents.” For example, the screen below shows that the following seven directories were created for all programming exercises.

2. Finish your programming exercise under the PE02 directory.
3. Write a 150-word analysis report to explain how the program works in [README.md](#) regarding the [input-process-output model](#). The README.md has three level-1 headings – Input, Process, and Output.
4. Submit the link of your GitHub repository to your course shell through your assignment submission.
